Hey guys

Mark is correct. We really don't have any knowledge of holding times.

I think within two weeks of collection is too tight. They're probably only targeting <30 days to get them extracted and then another <30 days to get them analyzed. That would be a maximum. I would be OK saying the split extracts should be provided within 60 days of collection.

Jeff

Jeff,

In case you missed this. Any comments to the below text.

Mark,
Any input from Jeff yet?

Rebecca

Rebecca,

I am not sure when the samples should be shipped post collection. I don't know that we have a good handle on holding times for new samples we are working on. I am okay if you put in 2 weeks or 30 days. I am going to ask Jeff what he thinks about this.

Jeff your comments?

Mark

Subject: Chemours Letter

Mark,

The WVDAQ is writing a letter specifying that ORD would like Chemours to maintain split samples of any further testing of PFAS in case that ORD would like to analyze. Additionally we are requesting that they give both ORD and WVDAQ a testing plan and 60 day notification of any testing so that ORD can be on site to take samples with summa canisters or just be on site for testing if requested. We are asking that any samples be shipped within two weeks of the sample date. Would this time frame be ok with you or would within 30 days be better or something else? I am going to confer with Chemours to see what is feasible but I also wanted to check with you.

Thank you,
Rebecca Johnson
WVDAQ
